Security engineering manager with 10+ years in application and cloud security. At AWS, leads a 15-person team securing enterprise agentic AI and machine learning platforms, grew it from 5 to 15, and owned risk decisions and remediation for approximately 350 security assessments. Has driven remediation of vulnerability classes across cloud services and open-source code, and led development of an LLM-driven security assessment toolkit that shortened assessment cycles by 25%.

PROFESSIONAL EXPERIENCE

Engineering Manager, AI and AGI Security @ Amazon Web Services | New York City, NY

Jul 2023 - Present

- Lead a 15-person team of security engineers; grew it from 5 to 15, hired 10+ engineers, and promoted five. Contributed to annual planning aligned with CISO priorities and managed headcount, open-source security, hackathon, and AI-development budgets.
- Led development of an LLM-driven security assessment toolkit for generative AI applications that shortened assessment cycles by 25%; defined launch requirements for prompt injection, agent subversion, tool authorization, data leakage, and human approval boundaries.
- Owned quality, risk decisions, and remediation follow-through for approximately 350 security assessments.
- Led a two-month, company-scale continuous-testing pilot for frontier models; managed personnel, defined bug-reporting standards, and coordinated remediation.
- Built a cross-team penetration-testing and application-security upskilling program, with \$150K saved to date against a \$250K+ one-year projection.
- Established continuous monitoring for application- and agent-layer prompt injection; automated FedRAMP evidence, remediated findings, and represented security to auditors.
- Influenced sandboxing and enterprise-security features for an agentic IDE and represented security in launch and go/no-go decisions.

Senior Security Engineer @ Amazon Web Services | New York City, NY

Oct 2022 - Jul 2023

- Built an open-source security program from zero; over two years, drove exploitable RCE, software-supply-chain, and CI/CD pipeline findings toward zero through continuous controls and incident-response mechanisms.
- Shipped secure-by-default GitHub CI/CD and Actions controls supporting 10,000+ repositories across 12-14 engineering teams.
- Led two engineers, set technical direction for a customer code-execution platform, and served as technical-escalation lead.

Security Engineer II @ Amazon Web Services | New York City, NY

Nov 2020 - Sep 2022

- Led triage, containment, root cause analysis, executive communication, and remediation for a confused-deputy issue spanning 150+ cloud services.
- Performed application security reviews, penetration tests, and code-focused assessments; developed security tooling, metrics, guidance, and training.

Security Engineer @ Lyft | San Francisco, CA

Nov 2019 - Nov 2020

- Ran the bug bounty program across mobile, web, and payments, triaging approximately five reports per day; recurring redirect and subdomain-takeover findings drove architectural remediation.
- Built a Python dependency management system that flagged out-of-SLA libraries across Python and Go services, and led the program's discovery, patching, and remediation as one of three product security engineers.
- Implemented automated code-security quality gates; conducted penetration tests, code reviews, and breach-readiness work.

Security Researcher @ Adobe | San Francisco, CA

Jun 2017 - Nov 2019

- Built a Python subdomain-takeover scanner that found internal cloud storage buckets exposed to takeover and claimed them preemptively.
- Led threat modeling and secure test planning across Product Engineering, Cloud Operations, and DevOps; advised product leaders on architectural fixes for flagship products.
- Led security for the Magento acquisition from pre-close assessment through integration; reviewed code in six languages and trained engineers and managers worldwide.

Software Developer and Consultant @ SAP | Bengaluru, India

Jul 2012 - Jul 2015

- Designed and developed the FATCA module for SAP Insurance and Banking.

SKILLS

- **Leadership:** hiring, promotion, annual planning, budget ownership, program rollout across teams
- **Vulnerability management:** assessment, triage, risk decisions, remediation tracking, bug bounty, dependency management, CI/CD and supply-chain security
- **AI security:** frontier-model testing, agentic systems, prompt injection, tool authorization, sandboxing
- **Coding:** Python (agentic runtime detection pipelines, dependency scanning, subdomain-takeover detection)

RESEARCH AND SPEAKING

- AI Safety Research Fellow, Heron AI Security (2026-Present). Building Python pipelines that chain security tools to analyze agent tool calls and execution traces and flag unsafe behavior at runtime for a purple-team observability study.
- Co-created and validated ACSE-Eval's threat-modeling and infrastructure-as-code datasets: 10,000+ Hugging Face downloads, 6 citations, presented at ESORICS 2025.
- Co-author, SecDrift, a preprint benchmark for security drift in AI-generated code.
- Speaker at LocoMocoSec and BSides Las Vegas; OWASP Call for Papers reviewer, 2025-2027.

EDUCATION AND CREDENTIALS

Certification: GIAC Defensible Security Architect (GDSA)

Carnegie Mellon University | MS, Information Technology - Information Security, 3.67 GPA, Aug 2015 - May 2017

SRM University | BTech, Computer Science and Engineering, 3.84 GPA, Aug 2008 - May 2012
